BUILT FOR HEALTHCARE.

**AI + HUMAN SUPPORT**  
REAL TIME CLINICAL WORKFLOW

# AI-Enabled Clinical Support Model

*A higher-value alternative to AI-only scribe tools*

## A balanced approach

KCCA combines AI-powered documentation with real-time support from fully bilingual clinical professionals who work alongside providers throughout the day.

## The Problem with AI-Only Tools

- Physicians still review notes
- Correct AI errors
- Enter orders
- Map diagnoses
- Manage referrals
- Continue EHR tasks

## How it works

- 1 AI Captures the Visit**  
The conversation is captured and drafted in real time.
- 2 Clinical Review & Refinement**  
A trained clinical professional reviews and refines the note.

- 3 Orders & Diagnoses**  
Orders, referrals, labs, and diagnoses are entered accurately by the live scribe.
- 4 Workflow Continuity**  
EHR tasks continue moving forward in real time.

Physicians, nurses, and staff still spend valuable time on administrative work, keeping providers tied to the screen during visits instead of fully focused on the patient.

## Why This Matters

- Providers stay fully present
- Less screen dependency
- Better patient interaction
- Reduced admin burden
- Improved clinic efficiency

## Why KCCA Is Different

- AI + real people
- Real-time support
- Reduced after-hours charting
- Better physician satisfaction
- More efficient use of in-clinic staff

**More than note generation.**

Real-time clinical support.
